Neuroscience and the Unconscious 1/27/18 with Dr. Catharine Jenkins-Hall

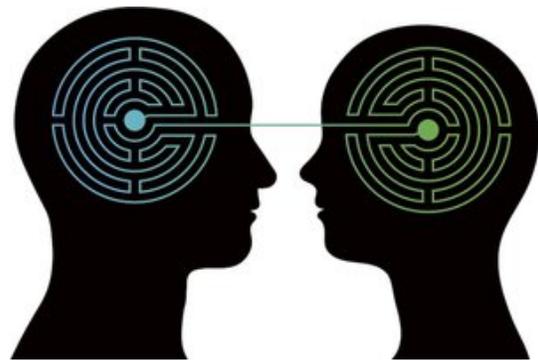

The instructor will share lessons she's learned from 30 year 'hybrid' clinical practice. Working in an acute medical/surgical context, she has married cognitive neuroscience with physiological psychology and psychoanalysis. Clinical material from the treatment of a patient who sustained a severe traumatic brain injury will be presented. It highlights the importance of careful analytic listening, especially when the speaker is unable to formulate complete sentences.

Using Empathy: Insights from Self Psychology, a Study Group & Case Consultation 2/10/18 with Dr. Judy Zevin

This course provides an introduction to the use of empathy in clinical work, using concepts from Self Psychology and an emphasis on clinical application. Participants will be provided with introductory material and asked to read it beforehand. They're also invited to consider case material to bring to class. There will be an opportunity for participants to share their own work in light of the group's reading and discussion.
